

ITT Enidine Inc. AR-15 AR-restor™ On Target With Improved Performance | Enidine Energy Absorption Application

By: William Shurmatz

Product Overview

The AR-15 (M4) assault rifle is the weapon of choice for law enforcement agencies and sportsmen alike. The weapon is known for its versatility, reliability, and economy. Unfortunately, multiple firing modes, ammunition loads, and a wide range of available accessories can aggravate “muzzle rise” and compromise the true performance achievable with this firearm.

Product Solution

ITT Enidine Inc., a market leader in hydraulic energy absorbers for the defense and aerospace industries manufactures hydraulic recoil buffers currently employed in many US and NATO forces automatic weapons. These buffers have a proven history of performance benefits to the user such as improved accuracy and target acquisition, recoil reduction, and lower firing rates. Now, ITT Enidine Inc. has focused our experience to provide the same results for the AR-15 (M4) family of weapons.

The ITT Enidine Inc. AR-restor™ is a hydraulic rate/recoil-reducing buffer offering a direct “drop-in” replacement for existing mechanical buffers. It offers significant benefits utilizing the power of hydraulics to help minimize the effects of “muzzle rise” and produce the maximum performance results from these weapons.

Application Opportunity

The Enidine AR-restor™ is a hydraulic rate/recoil-reducing buffer offering a direct “drop-in” replacement for existing mechanical buffers. It offers significant benefits utilizing the power of hydraulics to help minimize the effects of “muzzle rise” and produce the maximum performance results from these weapons.

Ar-15 AR-restor™
Hydraulic Buffer

Features & Benefits of AR-15 AR-restor™:

- Drop-in replacement
- Reduce felt recoil
- Improve accuracy
- Control firing rate
- Suppress Bolt Bounce
- Protect Optics
